

AUTISM

This fact sheet has been written by parent carers for parent carers.
Clinical information has been approved by West Sussex practitioners.

What is autism?

Autism is a lifelong developmental disorder that affects how a person communicates and interacts with other people, and makes sense of the world around them. Autism is a spectrum disorder, which means that although all people with autism have difficulties with certain things, the degree to which they are affected varies widely. Together, different types of autism are sometimes known as autistic spectrum conditions (ASCs). Around 1 in 100 people in the UK are known to have autism, with many more boys affected than girls.

Characteristics of autism

People with autism share difficulties in three areas. These are:

- Difficulty with social communication.
- Difficulty with social interaction, including reading emotions and facial expressions.
- Difficulty with social imagination.

Together, these three difficulties are known as the 'triad of impairments'. People with autism may also have sensory issues, with noise sensitivity being very common. Some people with autism also develop unusual and repetitive patterns of behaviour and obsessive interests.

People who are on the autistic spectrum may also have varying degrees of learning disabilities. They may also have other conditions such as: attention deficit hyperactivity disorder (ADHD); dyspraxia, which affects co-ordinating thoughts and movements; hypermobility syndrome; epilepsy or Tourette's syndrome.

Causes of autism

At the moment, the causes of autism are still unknown, although many experts believe that it may be the result of a number of different genetic and environmental factors.

Types of therapy

There is no 'cure' for autism but there are a number of therapies that may help your child:

- **Applied Behavioural Analysis (ABA)** – intensive therapy which breaks down skills into small tasks and teaches them in a highly structured way.
- **Social Stories** – short stories that teach children and adults with Autism what to expect in social situations or activities.
- **Speech and Language Therapy (SALT)** – specialist support provided by a therapist to help build language and communications skills.
- **TEACCH** – highly structured system of learning based on using visual prompts, which have found to be beneficial in teaching people with autism.
- There are a number of 'alternative' therapies available to treat children and adults with autism, some of which have little scientific proof of their effectiveness. It is advisable to consult your paediatrician or GP before proceeding with any therapy for your child.

AUTISM

Ask about

- **Autism charities in West Sussex – Autism Sussex:** go to www.autismsussex.org.uk or call 0345 450 0060. It runs behavioural advice services, parent workshops, coffee mornings, clubs and siblings clubs. The Worthing branch of the **National Autistic Society (NAS): 07766 525909.**
